

## CUSTOMER SUCCESS STORY

“ North American Coating Laboratories hardcoating and mirror coatings appeal to our demographic while also offering outstanding durability and longevity in the field.”

### The Customer:

A leading sport sunglass manufacturer that provides sunglasses for the serious sports enthusiast whose primary concern is optical performance and durability.

### The Challenge:

Creating a hardcoating and mirror coating that would be cosmetically appealing, but would also hold up to the rigors of extreme sports such as rock climbing, skiing, and wind surfing.

### The Solution:

NACL's dip applied hardcoating is a super abrasion resistant solution that is thermally cured and protects polymers against scratching, weathering, and wear and tear that occurs throughout the lifecycle of a typical sunglass lens.

This product is also used in the aviation and automotive industry and has stood up to such super destructive tests as a 336 hour salt and sulfur dioxide spray test. If this coating performs this well under the most extreme conditions science can produce, imagine how well it will perform in everyday life.

This is another example of the commitment to quality and service that NACL has exhibited throughout our 34 year history. North American Coating Laboratories provides specialized optical coatings for a wide variety of customers in both the polymer and glass optics markets. Our customer base includes companies such as Boeing, Lockheed Martin, BAE Systems, Corning, PPG, and many others.

Contact our sales department at 866-216-6225 and see the NACL difference for yourself. You can also visit us online at <http://www.nacl.com>.
